DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Monday, 29 January 2024 at 04:55 Local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Whilst the maps suggest Low levels of air pollution in all areas, there is low confidence in the forecast at the present time. There is the possibility of Moderate or perhaps pockets of High pollution, mainly in the southeastern half of the UK. This is due to the potential for transported Saharan dust being brought down to the surface. The variability in the recent forecast is a reflection of the high level of uncertainty regarding this process.

Tomorrow: Mostly Low air pollution is expected, but some lingering areas of Moderate pollution are possible in the far southeast as Saharan dust clears the UK.

Outlook: Low levels of air pollution are expected for the rest of the week, with higher confidence.
